

DEMONSTRATION REPORT

Dealer Intake Exception Audit

Illustrative five-card excerpt from a 25-card report. Records are anonymized and demonstrate decision categories; they are not customer results or valuation claims.

CONTINUE 1

VERIFY 2

STOP 1

DUPLICATE 1

ACTION QUEUE

CARD	ACTION	REASON	NEXT
01	Continue	Identity evidence is internally consistent	Complete listing fields
02	Verify	Same phrase appears in two semantic classes	Check product-line context
03	Stop	No supported authority match	Request clearer back image
04	Improve	Listing-critical set/parallel field is missing	Hold publication
05	Compare	Possible duplicate image/metadata pair	Confirm same physical card

REVIEWER NOTE

The system did not convert uncertainty into a confident answer. Cards 02-05 remain isolated from publication until the named evidence is supplied.

DETAILED FINDINGS

Card 01

SAFE TO CONTINUE

Observed evidence	Year, manufacturer, product line, subject, and card number agree across the submitted metadata and supported authority references.
Decision enabled	Improve listing
Why	No material identity conflict was surfaced. This does not evaluate condition, grade, authenticity, rarity, or price.
Next action	Complete the remaining listing fields and continue under normal dealer review.

Card 02

VERIFY

Observed evidence	The phrase 'Net Marvels' is present in more than one authority class in the inspected evidence path.
Decision enabled	Verify before listing
Why	A hard class assignment would create dangerous false certainty without product-line and set context.
Next action	Check the card back, checklist context, and product-line evidence before selecting a class.

Card 03

NO SUPPORTED MATCH

Observed evidence	OCR is incomplete and the submitted metadata does not produce a deterministic authority candidate.
Decision enabled	Research further
Why	Guessing would place unsupported identity into inventory and could contaminate a listing.
Next action	Request a clearer back image and preserve the item as unresolved until new evidence arrives.

Card 04

LISTING NOT READY

Observed evidence	Subject and manufacturer are supported, but the set/parallel field needed to distinguish the item is missing.
Decision enabled	Hold publication
Why	The current record may describe a broader family rather than the exact item.
Next action	Confirm set and parallel evidence; then rerun the identity check before publication.

Card 05

POSSIBLE DUPLICATE

Observed evidence	Image fingerprint and normalized metadata overlap another record in the submitted batch.
Decision enabled	Compare against another item
Why	A duplicate candidate is not proof that two records represent the same physical card.
Next action	Compare front/back images and inventory provenance before merging or deleting either record.

SCOPE LIMIT

This report supports intake and identity decisions. It does not provide a market value, price forecast, grade, condition assessment, rarity determination, or authentication guarantee.
